

The word problem in semiconcept algebras

Philippe Balbiani

Institut de recherche en informatique de Toulouse

Aims of this talk

To present a short introduction to **formal concept analysis**

To define and to study **concept algebras**

To sketch a proof that **the word problem in semiconcept algebras** is *PSPACE*-complete

Formal concept analysis

Formal concept analysis

A context for the planets

	<i>small</i>	<i>medium</i>	<i>large</i>	<i>near</i>	<i>far</i>	<i>yes</i>	<i>no</i>
<i>Mercury</i>	×			×			×
<i>Venus</i>	×			×			×
<i>Earth</i>	×			×		×	
<i>Mars</i>	×			×		×	
<i>Jupiter</i>			×		×	×	
<i>Saturn</i>			×		×	×	
<i>Uranus</i>		×			×	×	
<i>Neptune</i>		×			×	×	
<i>Pluto</i>	×				×	×	

Formal concept analysis

A context for the planets

Objects: the nine planets (*Mercury*, *Venus*, etc)

Attributes: the seven properties (*small*, *medium*, etc)

Concepts: ordered pairs (A, B) where

- ▶ A is a set of planets
- ▶ B is a set of properties
- ▶ A should contain just those planets sharing all the properties in B
- ▶ B should contain just those properties shared by all the planets in A

Formal concept analysis

A context for the planets

	<i>small</i>	<i>medium</i>	<i>large</i>	<i>near</i>	<i>far</i>	<i>yes</i>	<i>no</i>
<i>Mercury</i>	⊗			⊗			×
<i>Venus</i>	⊗			⊗			×
<i>Earth</i>	⊗			⊗		×	
<i>Mars</i>	⊗			⊗		×	
<i>Jupiter</i>			×		×	×	
<i>Saturn</i>			×		×	×	
<i>Uranus</i>		×			×	×	
<i>Neptune</i>		×			×	×	
<i>Pluto</i>	×				×	×	

Formal concept analysis

Contexts and concepts

Contexts, objects and attributes

Contexts: triples $\mathcal{S} = (\mathit{Obj}, \mathit{Att}, I)$ where Obj and Att are nonempty sets and $I \subseteq \mathit{Obj} \times \mathit{Att}$

\mathcal{S} -objects: elements of Obj (X , Y , etc)

\mathcal{S} -attributes: elements of Att (x , y , etc)

Formal concept analysis

Contexts and concepts

Polars and concepts

\mathcal{S} -polars: for $A \subseteq \text{Obj}$ and $B \subseteq \text{Att}$, define

- ▶ $A' = \{x \in \text{Att} : \text{for all } X \in A, I(X, x)\}$
- ▶ $B' = \{X \in \text{Obj} : \text{for all } x \in B, I(X, x)\}$

\mathcal{S} -concepts: pairs (A, B) where $A \subseteq \text{Obj}$ — the **extent** — and $B \subseteq \text{Att}$ — the **intent** — are such that

- ▶ $B' = A$
- ▶ $A' = B$

Concept lattice of a context $\mathcal{S} = (\text{Obj}, \text{Att}, I)$

$\mathcal{C}(\mathcal{S})$: set of all \mathcal{S} -concepts

$$\leq: (A_1, B_1) \leq (A_2, B_2) \iff A_1 \subseteq A_2 \text{ and } B_1 \supseteq B_2$$

Formal concept analysis

Returning to the planets

	<i>small</i>	<i>medium</i>	<i>large</i>	<i>near</i>	<i>far</i>	<i>yes</i>	<i>no</i>
1 : <i>Mercury</i>	⊗			⊗			⊗
2 : <i>Venus</i>	⊗			⊗			⊗
3 : <i>Earth</i>	×			×		×	
4 : <i>Mars</i>	×			×		×	
5 : <i>Jupiter</i>			×		×	×	
6 : <i>Saturn</i>			×		×	×	
7 : <i>Uranus</i>		×			×	×	
8 : <i>Neptune</i>		×			×	×	
9 : <i>Pluto</i>	×				×	×	

The concept ($\{1, 2\}, \{small, near, no\}$)

Formal concept analysis

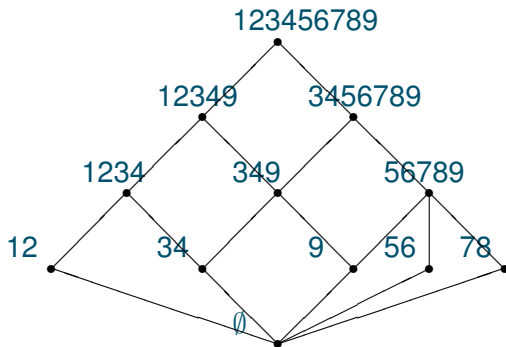

Returning to the planets

	<i>small</i>	<i>medium</i>	<i>large</i>	<i>near</i>	<i>far</i>	<i>yes</i>	<i>no</i>
1 : <i>Mercury</i>	×			×			×
2 : <i>Venus</i>	×			×			×

4 : <i>Mars</i>	⊗			⊗		⊗	
5 : <i>Jupiter</i>			×		×	×	
6 : <i>Saturn</i>			×		×	×	
7 : <i>Uranus</i>		×			×	×	
8 : <i>Neptune</i>		×			×	×	
9 : <i>Pluto</i>	×				×	×	

The concept ($\{3, 4\}, \{small, near, yes\}$)

Formal concept analysis

Returning to the planets

Concept algebras

Concept algebras

Join, meet and complement of concepts in context $\mathcal{S} = (Obj, Att, I)$

Join of concepts (A_1, B_1) and (A_2, B_2)

- ▶ $((A_1 \cup A_2)'', B_1 \cap B_2)$

Meet of concepts (A_1, B_1) and (A_2, B_2)

- ▶ $(A_1 \cap A_2, (B_1 \cup B_2)'')$

Complement of concept (A, B)

- ▶ $(Obj \setminus A, -)$? No since \bullet is not always an extent
- ▶ $(-, Att \setminus B)$? No since \bullet is not always an intent
- ▶ $((Obj \setminus A)'', (Obj \setminus A)')$? No since \bullet may intersect A
- ▶ $((Att \setminus B)', (Att \setminus B)'')$? No since \bullet may intersect B

Concept algebras

Empedocle's conception of the four elements

	<i>cold</i>	<i>moist</i>	<i>dry</i>	<i>warm</i>
<i>water</i>	×	×		
<i>earth</i>	×		×	
<i>air</i>		×		×
<i>fire</i>			×	×

Concept algebras

Concept lattice of Empedocle's conception of the four elements

Concept algebras

Concepts and semiconcepts

Contexts

- ▶ $\mathcal{S} = (Obj, Att, I)$ be a context
- ▶ $A \subseteq Obj$ be a set of objects
- ▶ $B \subseteq Att$ be a set of attributes

Concepts

- ▶ (A, B) is a \mathcal{S} -concept iff $B' = A$ and $A' = B$

Semiconcepts

- ▶ (A, B) is a \mathcal{S} -semiconcept iff $B' = A$ or $A' = B$

Concept algebras

Semiconcept algebra: example

	<i>a</i>	<i>b</i>
1		×
2	×	×

Concept algebras

Semiconcept algebra of context $\mathcal{S} = (Obj, Att, I)$

Structure $\mathcal{A}(\mathcal{S}) = (A^{\mathcal{S}}, \perp_l^{\mathcal{S}}, \top_r^{\mathcal{S}}, \top_l^{\mathcal{S}}, \perp_r^{\mathcal{S}}, \neg_l^{\mathcal{S}}, \neg_r^{\mathcal{S}}, \vee_l^{\mathcal{S}}, \wedge_r^{\mathcal{S}}, \wedge_l^{\mathcal{S}}, \vee_r^{\mathcal{S}})$
where $A^{\mathcal{S}}$ is the set of all \mathcal{S} 's semiconcepts and

- ▶ $\perp_l^{\mathcal{S}} = (\emptyset, Att)$
- ▶ $\top_r^{\mathcal{S}} = (Obj, \emptyset)$
- ▶ $\top_l^{\mathcal{S}} = (Obj, Obj')$
- ▶ $\perp_r^{\mathcal{S}} = (Att', Att)$
- ▶ $\neg_l^{\mathcal{S}}(A, B) = (Obj \setminus A, (Obj \setminus A)')$
- ▶ $\neg_r^{\mathcal{S}}(A, B) = ((Att \setminus B)', Att \setminus B)$
- ▶ $(A_1, B_1) \vee_l^{\mathcal{S}}(A_2, B_2) = (A_1 \cup A_2, (A_1 \cup A_2)')$
- ▶ $(A_1, B_1) \wedge_r^{\mathcal{S}}(A_2, B_2) = ((B_1 \cup B_2)', B_1 \cup B_2)$
- ▶ $(A_1, B_1) \wedge_l^{\mathcal{S}}(A_2, B_2) = (A_1 \cap A_2, (A_1 \cap A_2)')$
- ▶ $(A_1, B_1) \vee_r^{\mathcal{S}}(A_2, B_2) = ((B_1 \cap B_2)', B_1 \cap B_2)$

Concept algebras

Semiconcept algebra: example

	<i>a</i>	<i>b</i>
1		×
2	×	×

Concept algebras

Semiconcept algebra: equational theory

▶ \wedge_l is AC

▶ \wedge_l distributes over \vee_l

▶ $\neg_l(x \wedge_l x) = \neg_l x$

▶ $x \wedge_l (y \wedge_l y) = x \wedge_l y$

▶ $x \wedge_l (x \vee_l y) = x \wedge_l x$

▶ $x \wedge_l (x \vee_r y) = x \wedge_l x$

▶ $\neg_l(\neg_l x \wedge_l \neg_l y) = x \vee_l y$

▶ $\neg_l \perp_l = \top_l$

▶ $\neg_l \top_r = \perp_l$

▶ $\top_r \wedge_l \top_r = \top_l$

▶ $x \wedge_l \neg_l x = \perp_l$

▶ $\neg_l \neg_l (x \wedge_l y) = x \wedge_l y$

▶ $(x \vee_r x) \wedge_l (x \vee_r x) = (x \wedge_l x) \vee_r (x \wedge_l x)$

▶ $x \wedge_l x = x$ or $x \vee_r x = x$

\vee_r is AC

\vee_r distributes over \wedge_r

$\neg_r(x \vee_r x) = \neg_r x$

$x \vee_r (y \vee_r y) = x \vee_r y$

$x \vee_r (x \wedge_r y) = x \vee_r x$

$x \vee_r (x \wedge_l y) = x \vee_r x$

$\neg_r(\neg_r x \vee_r \neg_r y) = x \wedge_r y$

$\neg_r \top_r = \perp_r$

$\neg_r \perp_l = \top_r$

$\perp_l \vee_r \perp_l = \perp_r$

$x \vee_r \neg_r x = \top_r$

$\neg_r \neg_r (x \vee_r y) = x \vee_r y$

Concept algebras

Semiconcept algebra: representation theorem

Let $\mathcal{S} = (Obj, Att, I)$ be a **context**

- ▶ If $A^{\mathcal{S}}$ is the set of all \mathcal{S} 's semiconcepts then the structure $\mathcal{A}(\mathcal{S}) = (A^{\mathcal{S}}, \perp_I^{\mathcal{S}}, \top_r^{\mathcal{S}}, \neg_l^{\mathcal{S}}, \neg_r^{\mathcal{S}}, \vee_l^{\mathcal{S}}, \wedge_r^{\mathcal{S}})$ is a **semiconcept algebra**

Let $\mathcal{A} = (A, \perp_l, \top_r, \neg_l, \neg_r, \vee_l, \wedge_r)$ be a **semiconcept algebra**

- ▶ There exists a **context** $\mathcal{S}(\mathcal{A}) = (Obj^{\mathcal{A}}, Att^{\mathcal{A}}, I^{\mathcal{A}})$ such that \mathcal{A} is embeddable into the structure $\mathcal{A}(\mathcal{S}(\mathcal{A})) = (A^{\mathcal{S}(\mathcal{A})}, \perp_l^{\mathcal{S}(\mathcal{A})}, \top_r^{\mathcal{S}(\mathcal{A})}, \neg_l^{\mathcal{S}(\mathcal{A})}, \neg_r^{\mathcal{S}(\mathcal{A})}, \vee_l^{\mathcal{S}(\mathcal{A})}, \wedge_r^{\mathcal{S}(\mathcal{A})})$

The word problem in semiconcept algebras

The word problem in semiconcept algebras

Syntax

We define terms as follows

$$\blacktriangleright s ::= x \mid 0_l \mid 1_r \mid -_l s \mid -_r s \mid (s \sqcup_l t) \mid (s \sqcap_r t)$$

We define the following abbreviations

$$\blacktriangleright 1_l ::= -_l 0_l$$

$$\blacktriangleright 0_r ::= -_r 1_r$$

$$\blacktriangleright (s \sqcap_l t) ::= -_l(-_l s \sqcup_l -_l t)$$

$$\blacktriangleright (s \sqcup_r t) ::= -_r(-_r s \sqcap_r -_r t)$$

The word problem in semiconcept algebras

Semantics

A valuation based on a semiconcept algebra $\mathcal{A} = (\mathbf{A}, \perp_l, \top_r, \neg_l, \neg_r, \vee_l, \wedge_r)$ is a function

▶ $\theta: x \mapsto \theta(x) \in \mathbf{A}$

θ induces a function $\bar{\theta}: s \mapsto \bar{\theta}(s) \in \mathbf{A}$ as follows:

▶ $\bar{\theta}(x) = \theta(x)$

▶ $\bar{\theta}(0_l) = \perp_l$

▶ $\bar{\theta}(1_r) = \top_r$

▶ $\bar{\theta}(\neg_l s) = \neg_l \bar{\theta}(s)$

▶ $\bar{\theta}(\neg_r s) = \neg_r \bar{\theta}(s)$

▶ $\bar{\theta}(s \sqcup_l t) = \bar{\theta}(s) \vee_l \bar{\theta}(t)$

▶ $\bar{\theta}(s \sqcap_r t) = \bar{\theta}(s) \wedge_r \bar{\theta}(t)$

The word problem in semiconcept algebras

The word problem

Input:

- ▶ Terms s, t

Output:

- ▶ Decide whether $s \not\approx t$, i.e. whether there exists a valuation θ based on a semiconcept algebra $\mathcal{A} = (\mathbf{A}, \perp_l, \top_r, \neg_l, \neg_r, \vee_l, \wedge_r)$ such that $\bar{\theta}(s) \neq \bar{\theta}(t)$

Computational complexity:

- ▶ The word problem in semiconcept algebras is *PSPACE*-complete

The word problem in semiconcept algebras

Solving the word problem

K^2 : a basic 2-sorted modal logic:

▶ Syntax:

▶ $F ::= P \mid \perp \mid \neg F \mid (F \vee G) \mid \Box f$

▶ $f ::= p \mid \perp \mid \neg f \mid (f \vee g) \mid \Box F$

▶ Semantics:

▶ $\mathcal{M} = (S, V)$ where $S = (Obj, Att, I)$ is a context and:

▶ $V: P \mapsto V(P) \subseteq Obj$

▶ $v: p \mapsto v(p) \subseteq Att$

▶ $\mathcal{M}, X \models P$ iff $X \in V(P)$

▶ $\mathcal{M}, x \models p$ iff $x \in v(p)$

▶ $\mathcal{M}, X \models \Box f$ iff for all $x \in Att$, if $\mathcal{M}, x \models f$ then XIx

▶ $\mathcal{M}, x \models \Box F$ iff for all $X \in Obj$, if $\mathcal{M}, X \models F$ then XIx

▶ The satisfiability problem for K^2 is *PSPACE*-complete

The word problem in semiconcept algebras

Solving the word problem

Restriction of the syntax of K^2 :

- ▶ $F ::= P \mid \perp \mid \neg F \mid (F \vee G) \mid \Box f$
- ▶ $f ::= \perp \mid \neg f \mid (f \vee g) \mid \Box F$

Syntax of the word problem:

- ▶ $s ::= x \mid 0_l \mid 1_r \mid \neg_l s \mid \neg_r s \mid (s \sqcup_l t) \mid (s \sqcap_r t)$

The word problem in semiconcept algebras

Solving the word problem

A reduction from K^2 to the word problem:

▶ $T(P_i) = x_i$

▶ $T(\perp) = 0_l$

▶ $T(\neg F) = -_l T(F)$

▶ $T(F \vee G) = T(F) \sqcup_l T(G)$

▶ $T(\Box f) = -_l -_l -_r -_r t(f)$

$t(\perp) = 1_r$

$t(\neg f) = -_r t(f)$

$t(f \vee g) = t(f) \sqcap_r t(g)$

$t(\Box F) = -_r -_r -_l -_l T(F)$

F is satisfiable iff $T(F) \neq 0_l$

The word problem in semiconcept algebras

Solving the word problem

Syntax of the word problem:

$$\blacktriangleright s ::= x \mid 0_l \mid 1_r \mid \neg_l s \mid \neg_r s \mid (s \sqcup_l t) \mid (s \sqcap_r t)$$

Syntax of K^2 :

$$\blacktriangleright F ::= P \mid \perp \mid \neg F \mid (F \vee G) \mid \Box f$$

$$\blacktriangleright f ::= p \mid \perp \mid \neg f \mid (f \vee g) \mid \Box F$$

The word problem in semiconcept algebras

Solving the word problem

A reduction from the word problem to K^2 :

- | | |
|---|---|
| ▶ $F(x_i) = P_i$ | $f(x_i) = p_i$ |
| ▶ $F(0_l) = \perp$ | $f(0_l) = \Box \perp$ |
| ▶ $F(1_r) = \Box \perp$ | $f(1_r) = \perp$ |
| ▶ $F(-_l s) = \neg F(s)$ | $f(-_l s) = \Box \neg F(s)$ |
| ▶ $F(-_r s) = \Box \neg f(s)$ | $f(-_r s) = \neg f(s)$ |
| ▶ $F(s \sqcup_l t) = F(s) \vee F(t)$ | $f(s \sqcup_l t) = \Box (F(s) \vee F(t))$ |
| ▶ $F(s \sqcap_r t) = \Box (f(s) \vee f(t))$ | $f(s \sqcap_r t) = f(s) \vee f(t)$ |

$s \not\approx t$ iff $\neg(F(s) \leftrightarrow F(t))$ is p-satisfiable or $\neg(f(s) \leftrightarrow f(t))$ is p-satisfiable

Conclusion

What we have done

- ▶ *PSPACE*-completeness of the word problem in semiconcept algebras

Open problems

- ▶ Tableaux-based procedure for deciding the word problem in semiconcept algebras
- ▶ Unifiability of terms in semiconcept algebras
